SKILLS

Skills & Technologies JavaScript | Python | SQL | KQL | C# | Backend systems | Distributed systems | Infrastructure-as-code | ETL pipelines | Azure DevOps

Cloud Experience **Azure:** EV2 | ADF | Kusto | Functions | Key Vault | Monitor

AWS: Lambda | S3 | RDS | API Gateway | IoT Core | Timestream

EXPERIENCE

Microsoft

May 2025 - Present

Software Engineer II

Redmond, WA

- Migrated security-critical ETL pipelines to a sovereign-cloud-compliant deployment architecture using IaC, delivering 40+ production pipelines.
- Developed prompt-assisted workflows and build scripts to automate repeatable pipeline migration tasks, significantly reducing manual toil and accelerating future migrations.
- Redesigned virtual machine inventory reporting to rely on day-one cloud data sources, contributing to inventory shift-left initiatives by enabling earlier availability of key security KPIs in new sovereign environments.

JumpShot, Inc.

Nov 2022 - Feb 2025

Software Engineer

Kent, WA

- Designed and delivered a full-stack prototype experience for a next gen basketball entertainment venue, integrating React, Node.js, and MongoDB for seamless game management & UX, securing >\$5m of funding.
- Engineered real-time synchronization between hardware, AI, and UI with Socket.io, MQTT, & Modbus to enable live gameplay with dynamic graphics by achieving imperceptible latency across 10+ services/devices.
- Trained and implemented a custom computer vision model to track players and basketballs in low-light conditions using Python, CVAT, and Roboflow, significantly improving accuracy.
- Created AI-powered games, leveraging LLMs to dynamically generate unlimited versions of gameplay.
- Created an HMI and custom sensor modules communicating via MQTT and Modbus to enable real-time gameplay on a PLC-operated machine.
- Co-invented hardware/software solutions described in 4 patent applications, driving innovative experiences.
- Produced specifications & vetted 5+ vendors, selecting the optimal vendor to iterate & scale into final production.

GetSetUp

Mar 2022 - Nov 2022

Software Engineer

Remote

- Owned full-stack development to reduce support costs by >\$1m/yr by automating agent workflows and minimizing ticket volume, collaborating with support leads to create the following tooling:
 - Migrated to Zendesk CRM by building a custom help center, integrating the chat widget, and connecting user databases via event-driven microservices.
 - Developed services to import existing data and to merge contextual data into Zendesk tickets for class chat sessions, enabling agents to identify users.
- Implemented event-based UX tracking to measure the impact of interface optimizations on search performance & user engagement, leading to improved overall user experience.

PROJECTS

Quieter Cities - <https://quietercities.org>

Built and deployed a civic feedback platform to reduce friction in reporting recurring noise issues, instrumented with analytics to validate real-world engagement with 400+ submissions.

Ski DIN Calculator

Designed, built, and shipped a ski binding DIN calculator using the official Marker standard, delivered via a [website](#) and [Android app](#) with >4,000 downloads and a 5-star rating.

Capstone - Automated Greenhouse

Led a team of 4 to develop a modular greenhouse automation system with real-time data collection built on AWS architecture & a mobile app interface. Awarded Best C.S. Capstone Project 2022.

EDUCATION

B.S. Computer Science, Cum Laude

Bellevue College
